WEEKLY HEALTH REPORT

NATURE OF THE DATA

The data presented here are taken from the Statistical Health Reports, WD AGO 8-122, rendered weekly to the Office of The Surgeon General by every hospital and separate dispensary in the continental United States. Troops in transit and certain small detachments are not required to submit reports; for this and other reasons, total strength of reporting units has been consistently about 1 percent below the actual strength of the Army in this country. The mean strength shown for individual stations is that of Army personnel attached or assigned for medical care and does not include organizations not on the post but dependent on the station for hospitalization.

Because of the desirability of placing the information in circulation at the earliest possible time following its receipt, figures are in general shown herein as reported. Where there is some doubt as to the accuracy of the reported figures, their verification is requested, and the fact that they have been so questioned is indicated by the symbol (!).

MORBIDITY DATA

Admissions are reported only for cases admitted to a medical installation (either to hospital or quarters) and not returned to duty within the same day, except for certain cases carded for record only (chiefly venereal disease cases treated on a duty status, and deaths which occurred before admission to hospital or quarters). Admissions designated as "injury" comprise all "new" traumatisms (i.e., morbid conditions due to external causes, including poisons taken internally, results of exposure to heat, cold and light, as well as various types of wounds not due to enemy action) other than battle casualties. Under present conditions there would not be any direct admissions in the continental United States properly classifiable as battle casualties. All cases other than those of injury or battle casualty are classified as "disease."

Admission rates are shown for all causes combined, for all diseases combined, for injuries and for a few specific diseases. These rates are presented on an annual basis to facilitate comparisons with corresponding rates in annual and monthly reports. Such annual rates of admission indicate the number of admissions per thousand mean strength which would occur over a year's time if the current week's experience continued for a year.

The report also shows the number of cases of the more common communicable and certain other diseases of special interest. It may be noted that under the term infectious hepatitis are included cases reported as jaundice and cholangitis. Appended is a list of cases reported for the rarer communicable and certain other diseases.

The proportion of the average daily strength of the command which is confined to hospital or quarters (including patients evacuated from overseas) is given in the "Year-to-date" section of the summary table. The mean number of noneffectives per thousand strength shown in the weekly section of the summary table includes only patients admitted to hospital or quarters from activities in the Continental United States; these figures, therefore, are noneffective rates for troops stationed in the United States.

The number of enlisted men discharged during the week on Certificates of Disability for Discharge (CDD) are shown for individual stations. These data should be distinguished from the figures for "honorable discharges for physical and mental disqualification" assembled by The Adjutant General's Office; the latter include discharges for inaptness in addition to CDD's and are tabulated on a somewhat different basis (e.g., the April data represent April discharges processed by the AGO during April and May plus discharges prior to April which were processed in May).

In making comparisons between Service Commands it should be borne in mind that morbidity rates naturally tend to be higher in those Service Commands which have a relatively large number of General Hospitals and Ports of Embarkation. The presence of sizeable numbers of troops not under the jurisdiction of a Service Command (e.g. casualties, task force troops, etc.) affects the interpretation of the data from the viewpoint of Command responsibility.

MORTALITY DATA

Recent studies indicate that the reporting of deaths on WD AGO 8-122 is incomplete, especially in the case of deaths from injury. The resulting understatement in the mortality rate from injury may be as much as 10 percent and occasionally even more, but the death rate from disease is not materially understated. Therefore in computing mortality rates from injury and from all causes on the basis of the corresponding numbers of deaths, as shown in this report, an appropriate adjustment for the underreporting of such deaths must be made.

STATIONS WITH HIGHEST MORBIDITY RATES

Included in the report is a table listing the stations (having strength of 5000 or over) with the highest morbidity rates from all causes, from all diseases combined, from injuries, and from a few specific diseases. Not infrequently, the excessively high rates of admission for all causes and for all diseases combined reported from reception centers reflect a large number of venereal disease cases among newly inducted men. Therefore, more significant of high morbidity from disease are the rates of admission for disease excluding venereal infections existing prior to induction, which rates are also shown in the table. It should also be noted that reception, redistribution, and separation centers frequently report relatively large numbers of admissions arising from routine physical examinations of large bodies of troops.

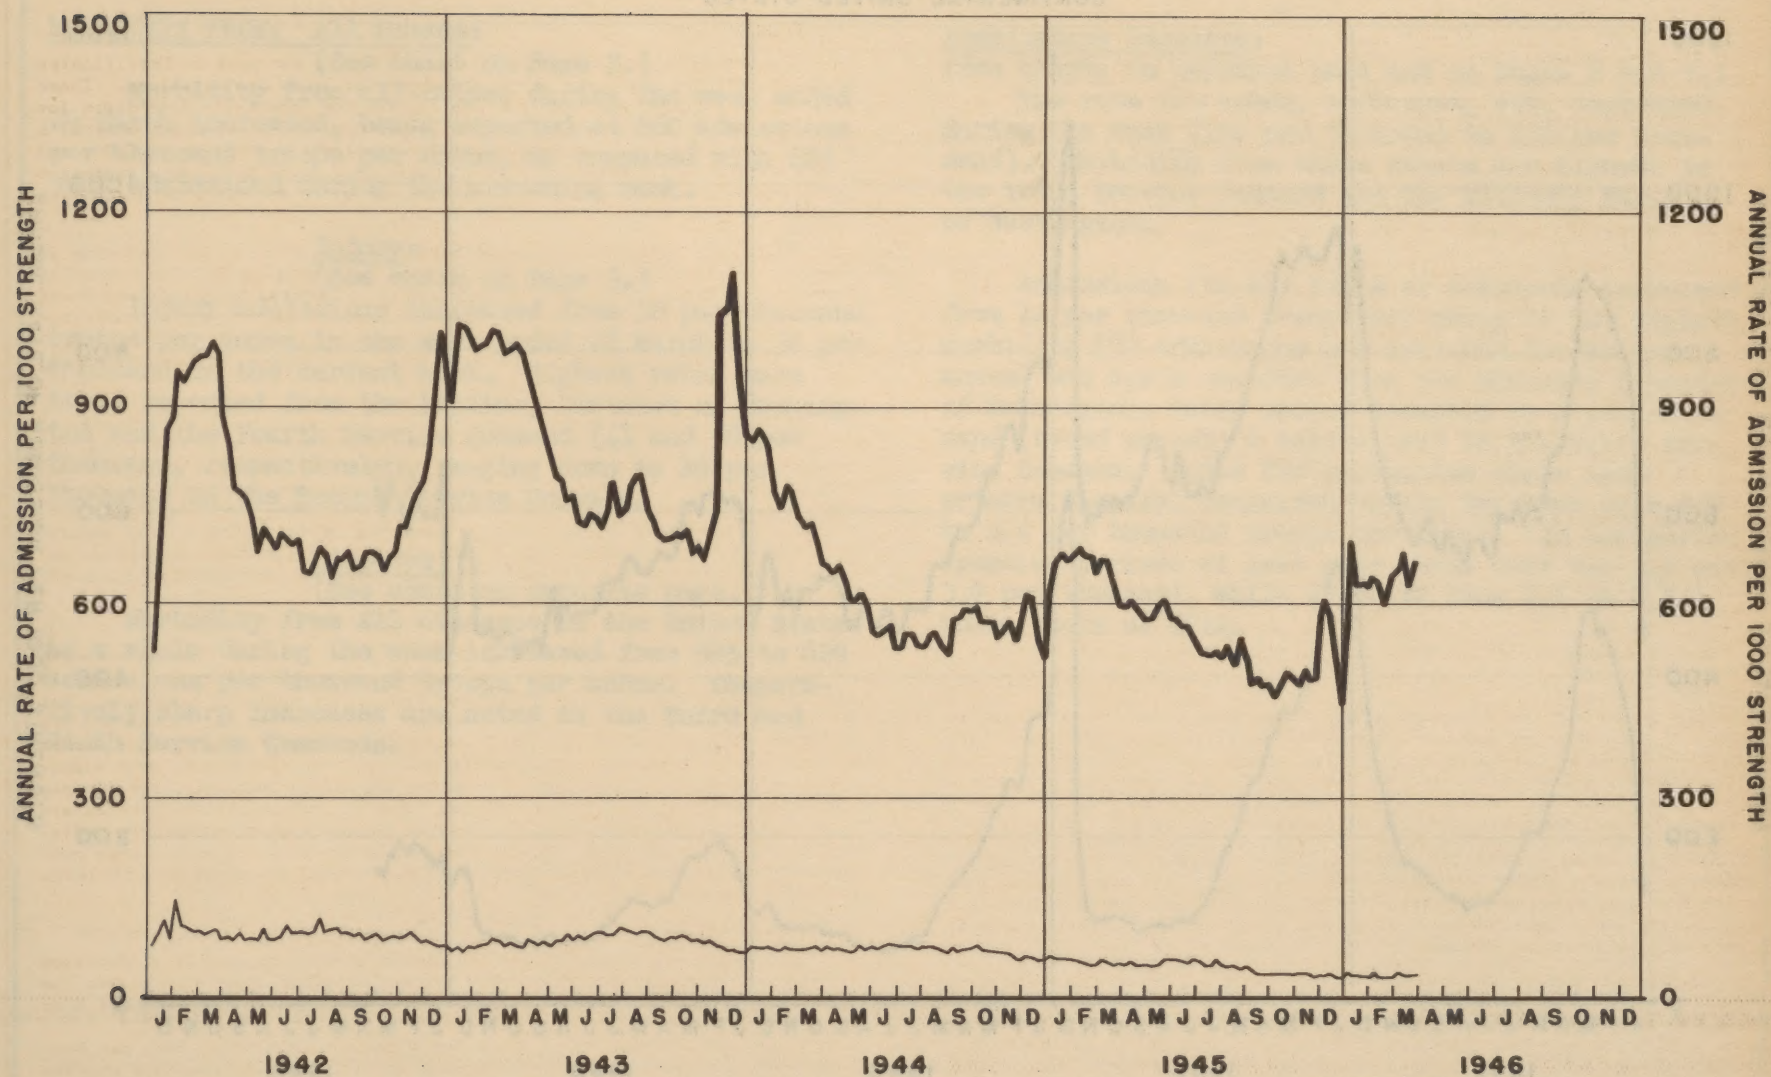

EXPLANATORY MATTER

In reading the detail tables, it should be borne in mind that admission rates based on small numbers of cases are not reliable. For this reason the symbol (?) is placed after admission rates computed on the basis of 5 or fewer cases.

Where the current week's data for a particular station have not been received, the latest available figures are substituted therefor and the symbol (X) is placed after the name of the station.

COMMENT ON CURRENT TRENDS

MORBIDITY FROM: All Causes:

(See chart on Page 3.)

Morbidity from all causes during the week ended 29 March increased, being reported at 660 admissions per thousand troops per annum, as compared with 625 such admissions during the preceding week.

Injury:

(See chart on Page 3.)

Injury admissions increased from 30 per thousand troops per annum in the week ended 22 March to 31 per thousand in the current week. Highest rates were those reported from the Military District of Washington and the Fourth Service Command (41 and 36 per thousand, respectively), ranging down to 19 per thousand in the Second Service Command.

Diseases:

(See chart on opposite page.)

Morbidity from all diseases in the United States as a whole during the week increased from 595 to 629 admissions per thousand troops per annum. Comparatively sharp increases are noted in the Third and Ninth Service Commands.

Respiratory Diseases:

(See charts on opposite page and on Pages 6 and 7.)

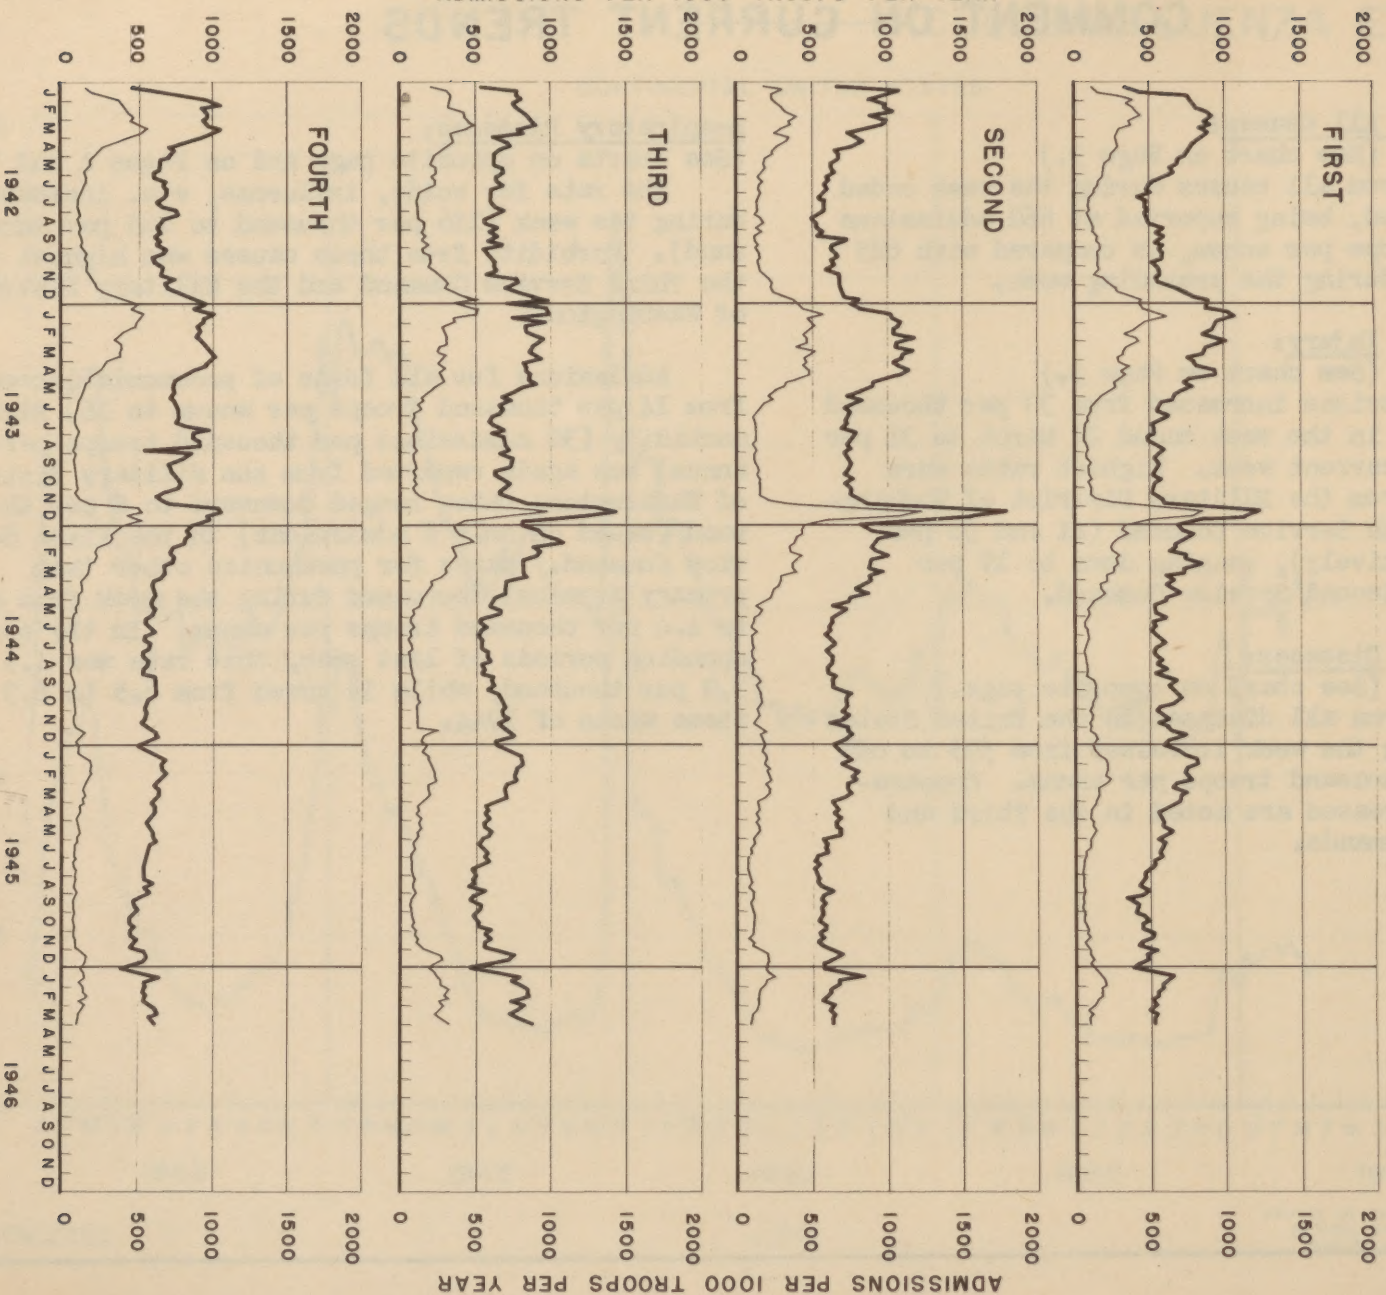

The rate for colds, influenza, etc. increased during the week (156 per thousand to 165 per thousand). Morbidity from these causes was highest in the Third Service Command and the Military District of Washington.

Admissions for all forms of pneumonia increased from 14 per thousand troops per annum to 16. Highest morbidity (32 admissions per thousand troops per annum) was again reported from the Military District of Washington; rates ranged downward to 8 per thousand (based on only 6 admissions) in the First Service Command. Rates for pneumonias other than primary atypical decreased during the week from 4.9 to 4.4 per thousand troops per annum. In the corresponding periods of last year, this rate was 4.5 and 3.9 per thousand, while it moved from 6.5 to 6.3 in these weeks of 1944.

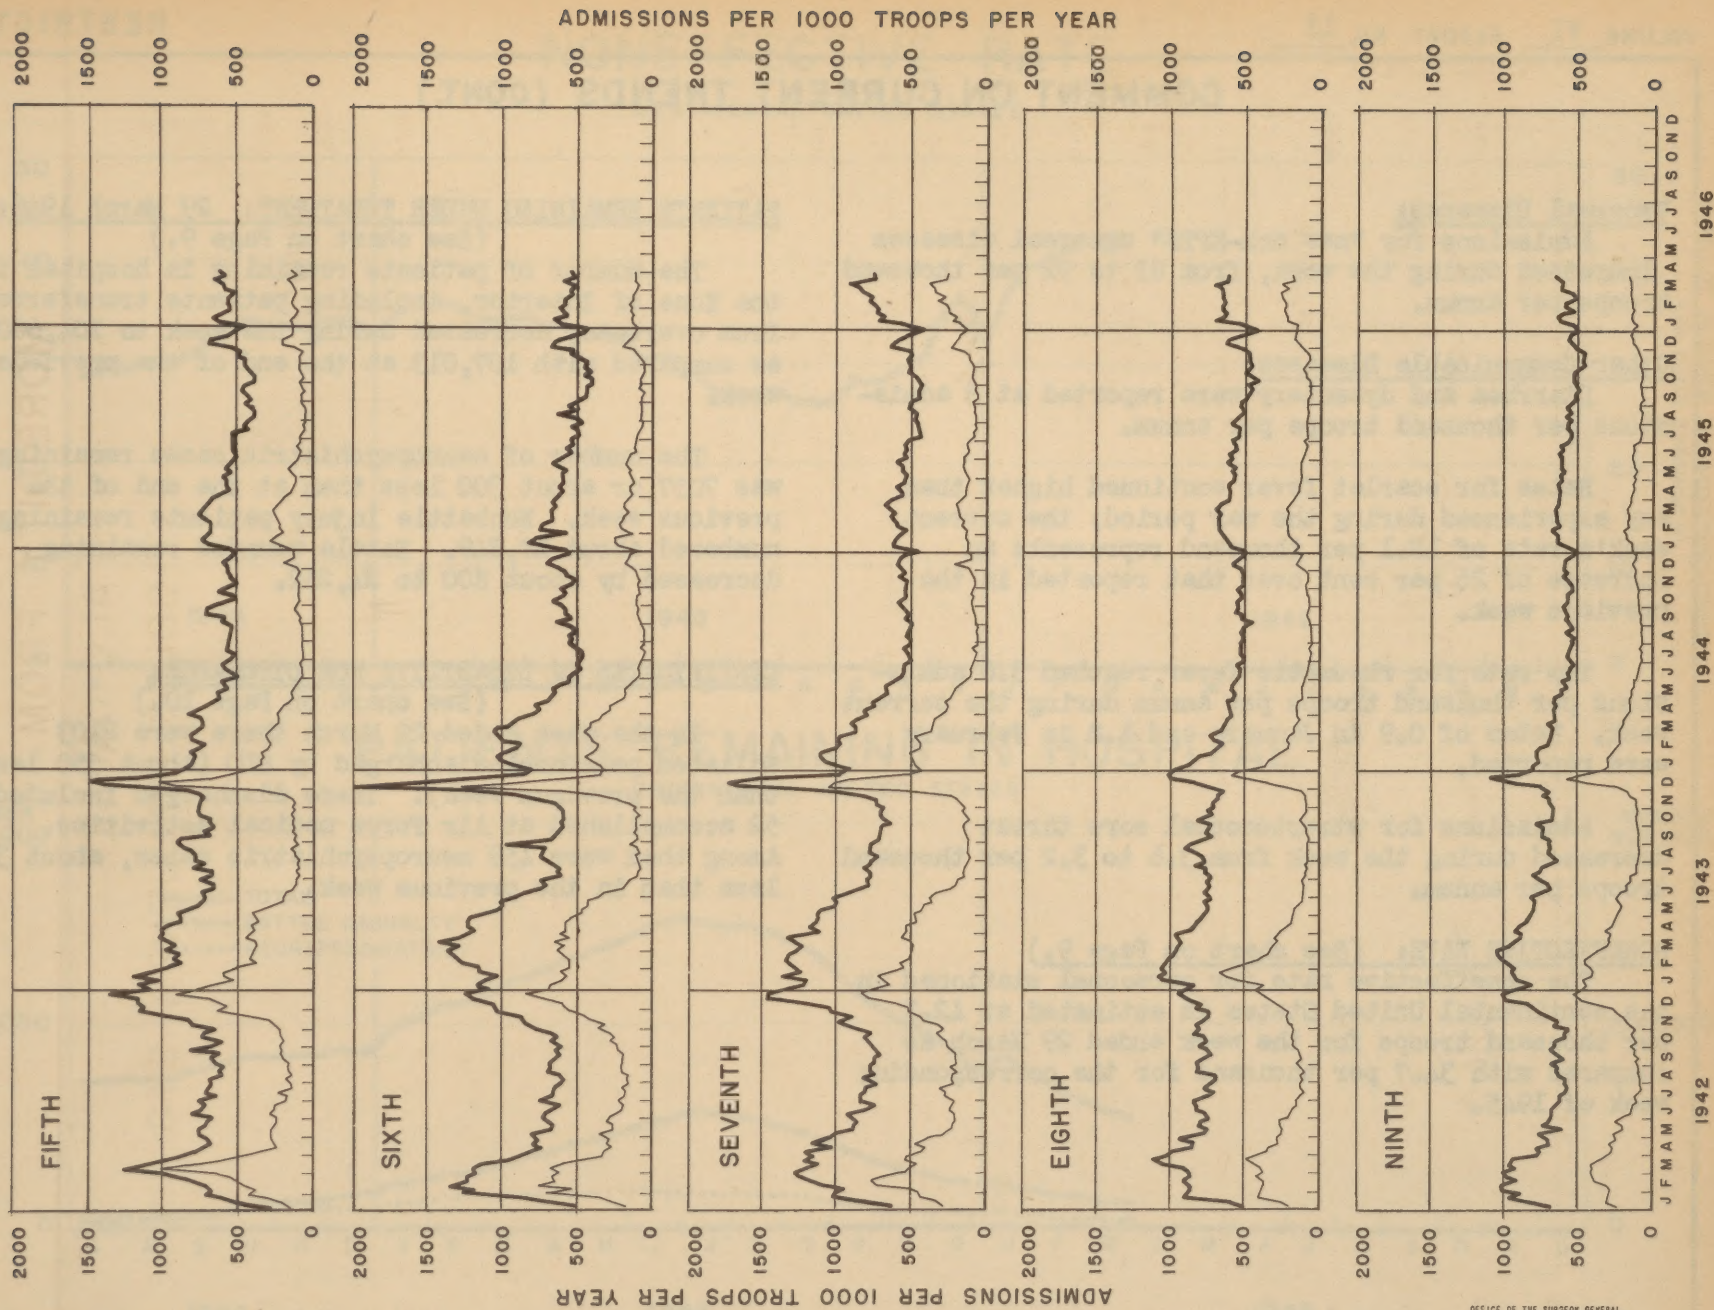

VARIATIONS BY SERVICE COMMAND

MORBIDITY FROM

—— ALL CAUSES
 —— COLDS, INFLUENZA, ETC.

VARIATIONS BY SERVICE COMMAND (CONT.)

OFFICE OF THE SURGEON GENERAL
MEDICAL STATISTICS DIVISION, HEALTH REPORTS BRANCH

COMMENT ON CURRENT TRENDS (CONT.)

Venereal Diseases:

Admissions for "new non-EPTS" venereal diseases increased during the week, from 83 to 92 per thousand troops per annum.

Other Communicable Diseases:

Diarrhea and dysentery were reported at 3 admissions per thousand troops per annum.

Rates for scarlet fever continued higher than any experienced during the war period; the current week's rate of 18.1 per thousand represents an increase of 26 per cent over that reported in the previous week.

The rate for rheumatic fever reached 3.6 admissions per thousand troops per annum during the current week. Rates of 0.9 in January and 1.2 in February were reported.

Admissions for streptococcal sore throat decreased during the week from 3.6 to 3.2 per thousand troops per annum.

NONEFFECTIVE RATE: (See chart on Page 9.)

The noneffective rate for personnel stationed in the continental United States is estimated at 42.3 per thousand troops for the week ended 29 March as compared with 34.7 per thousand for the corresponding week of 1945.

PATIENTS REMAINING UNDER TREATMENT: 29 March 1946:
(See chart on Page 9.)

The number of patients remaining in hospital in the Zone of Interior, including patients transferred from overseas, decreased during the week to 104,600 as compared with 107,013 at the end of the previous week.

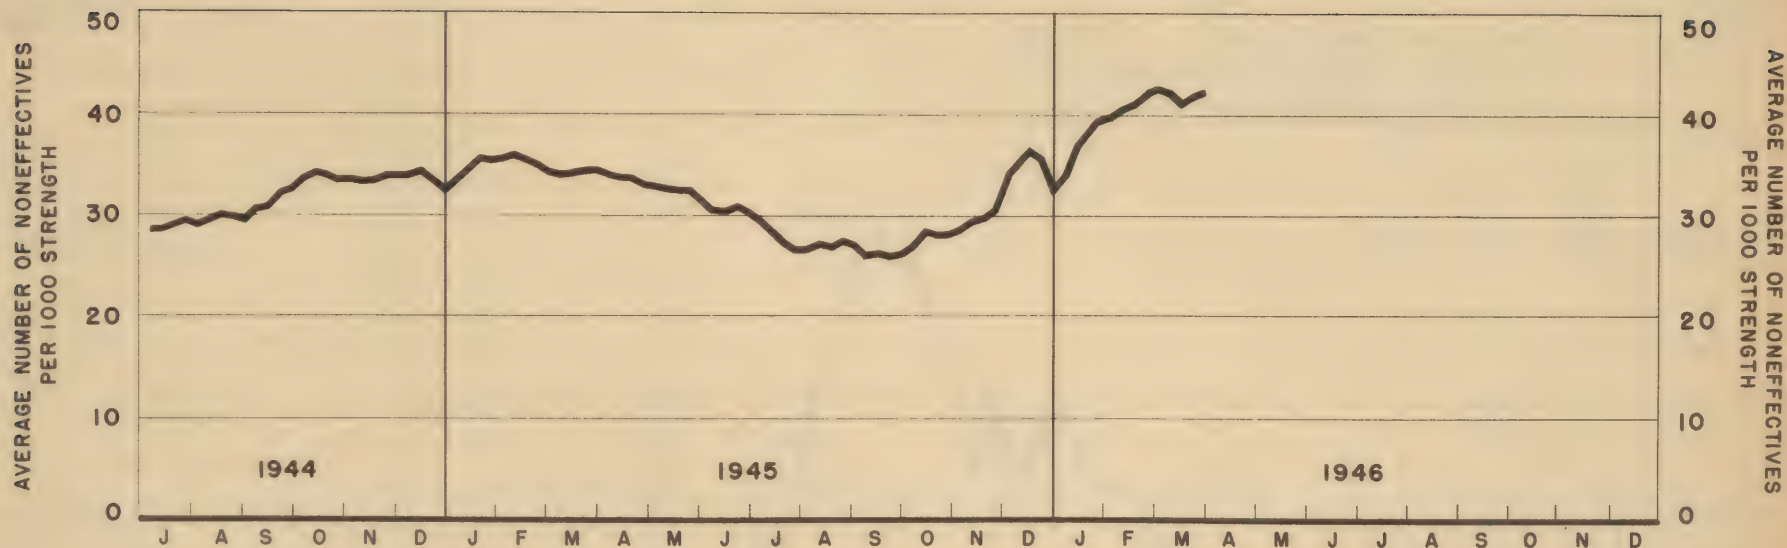

The number of neuropsychiatric cases remaining was 7057 or about 300 less than at the end of the previous week. Nonbattle injury patients remaining numbered about 18,849. Battle wounded remaining decreased by about 800 to 24,252.

CERTIFICATES OF DISABILITY FOR DISCHARGE:
(See chart on Page 10.)

In the week ended 29 March there were 2103 enlisted personnel discharged by CDD (about 350 less than the previous week). These discharges included 52 accomplished at Air Force medical activities. Among them were 459 neuropsychiatric cases, about 35 less than in the previous week.

RESTRICTED

COMMENT ON RECENT DEVELOPMENTS

FOR THE FOUR-WEEK PERIOD ENDED 22 FEBRUARY 1946

NATURE OF THE DATA:

The data of this Monthly Report, like those of the Weekly Health Reports, have been taken from WD AGO Form 8-122 rendered weekly to the Office of The Surgeon General by every hospital and separate dispensary in the continental United States. However, unlike the Weekly Health Reports which are compiled on the basis of the figures as received, so as to place the information in circulation at the earliest possible time, the figures here presented for the four-week period ended 22 February 1946 include the great majority of the corrected reports as well as reports received too late to be incorporated in the Weekly Health Report.

This report covers morbidity and mortality data for all individual stations with a strength of 1000 or over and gives details for admissions from venereal diseases and for neuropsychiatric cases.

Charts showing morbidity trends from all causes, from all diseases combined, from injury, and colds, influenza, etc., are presented on page 23. Similar charts for specified diseases appear on pages 25 and 26. A chart showing mortality trends is presented on page 29. A summary for the month of the number of admissions and corresponding morbidity rates and of the number of deaths and corresponding mortality rates for the United States as a whole and for the service commands is given on pages 30 and 31. The most pertinent morbidity data for individual stations are presented on pages 32 to 47. On pages 48 and 49 the seven stations with the highest rates of admission during the month are shown for each of the morbidity categories considered.

In reading the detailed tables, it should be borne in mind that morbidity (or mortality) rates based on small numbers of cases are not reliable. For this reason the symbol "?" has been placed after rates computed on the basis of 5 or fewer cases. Attention is invited to the definitions of admissions and admission rates and the discussion of the proportion of total Army strength included in the stations covered by this report as given on page 2. The term "month" in this report is used to denote the four- or five-week period based on the number of Fridays in the calendar month.

MORBIDITY FROM ALL CAUSES, DISEASE, AND INJURY:

The admission rate for all causes for the Army in the continental United States decreased to 622 during February as compared with 630 for the previous month. The rate for diseases decreased to 593 per thousand per annum, while that for injuries fell from 30 in January to 29 in February.

Disease admission rates increased during February by 10 to 15 per cent in the Third and Seventh Service Commands and the Military District of Washington, while a five per cent increase was observed in the Eighth Service Command.

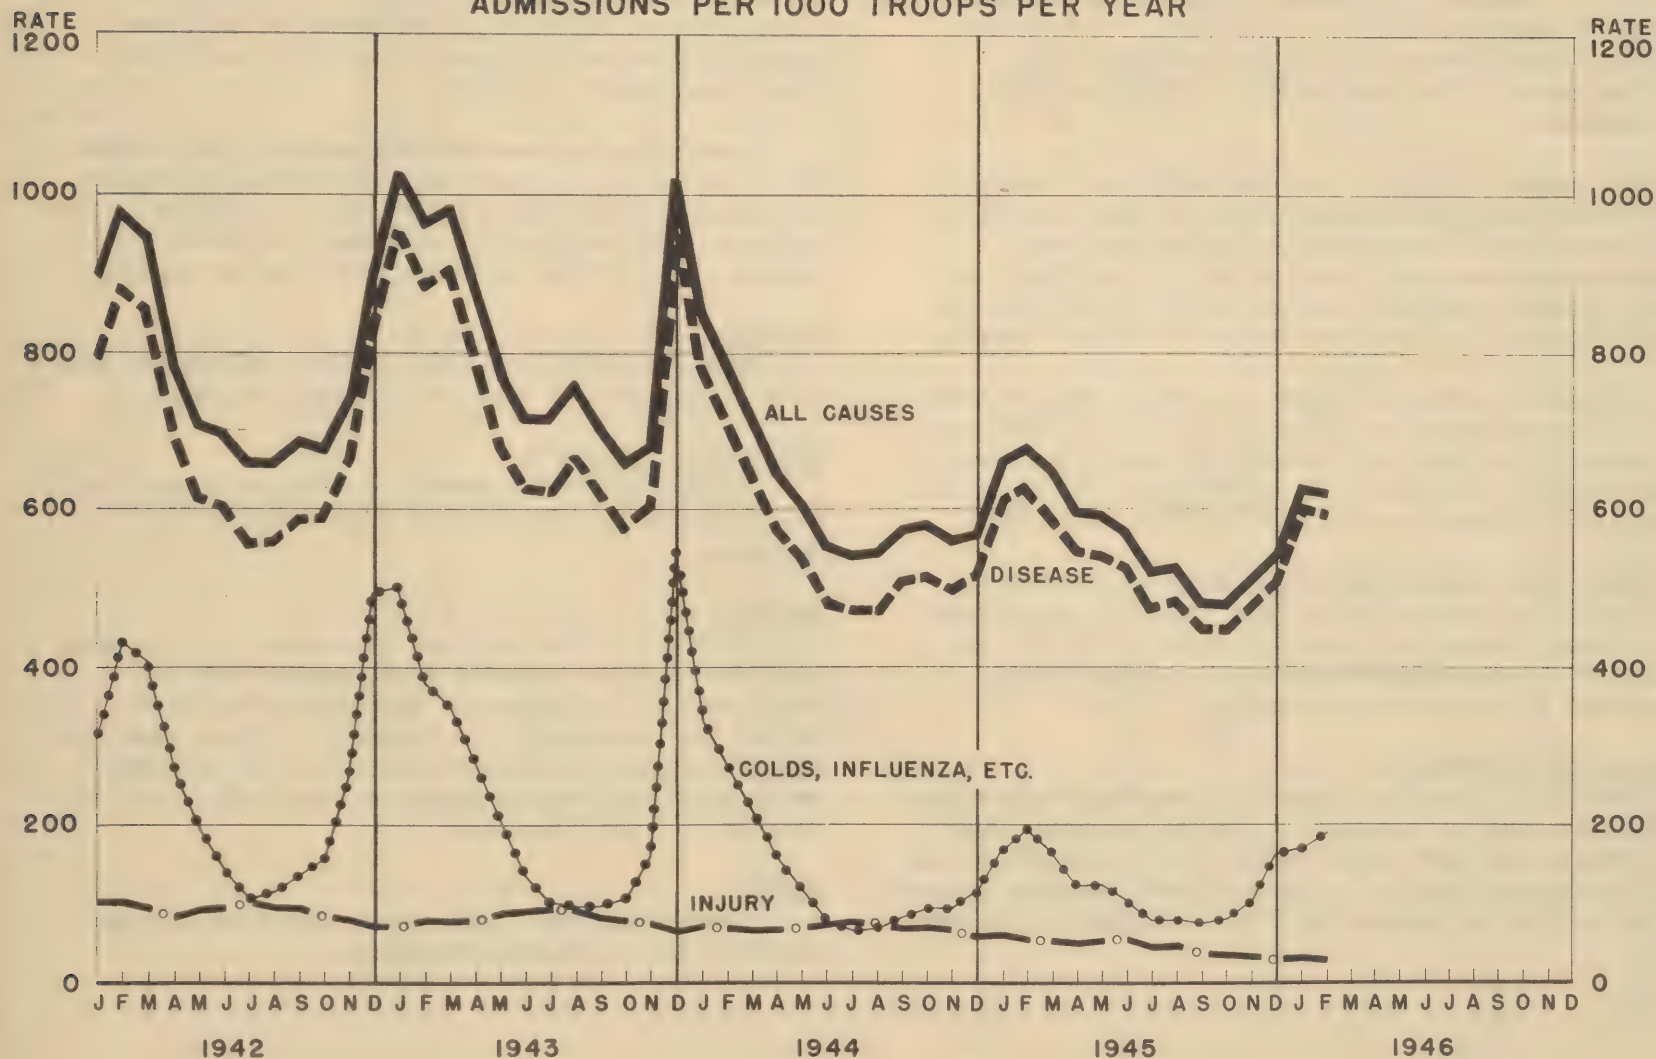

The admission rate for injury increased in the First and Eighth Service Commands; highest morbidity being reported by the Ninth Service Command, with a rate of 37 per thousand.

——— INJURY ——— COLDS, INFLUENZA, ETC.

CONTINENTAL UNITED STATES

ADMISSIONS PER 1000 TROOPS PER YEAR

COMMENT ON RECENT DEVELOPMENTS (CONT.)

RESPIRATORY DISEASES:

During February the admission rate for common respiratory diseases increased by about 11 per cent (172 per thousand to 191 per thousand). A rate of 192 per thousand was reported for February 1945, while the rate in the same month of 1944 was 272 per thousand.

The lowest rate (117 per thousand) was reported by the Fifth Service Command; highest (412 per thousand) from the Military District of Washington. Sharpest increases were those noted in the Third and Seventh Service Commands (about 30 per cent) and the Military District of Washington (about 25 per cent).

Morbidity from all forms of pneumonia increased from 15.5 per thousand in January to 18.8 in February as compared with 14.6 in February of last year, and 19.9 in 1944. Decreases in these rates are observed in the First, Second, and Ninth Service Commands.

Morbidity from atypical primary pneumonias in the United States as a whole rose from 9.5 admissions per thousand troops per annum in January to 12.7 in February, with decreases being noted in the First, Second, and Fifth Service Commands.

DIARRHEA AND DYSENTERY:

Morbidity from diarrhea and dysentery fell from 4.3 per thousand in January to 3.0 in February, the rates continuing much lower than those reported in the same periods last year. Only the First Service Command reported a rate in excess of 5 per thousand per annum.

VENEREAL DISEASES:

Reported admissions for venereal diseases, excluding cases contracted prior to entry into service, dropped off during the month to 67.1 per thousand troops per annum, from 71.3 such admissions reported in January.

Morbidity represented by venereal EPTS cases was reported at 4.6 per thousand during February as compared with 3.2 per thousand in January. The average weekly number of venereal EPTS cases in February was 155 as compared with 124 in January.

SCABIES:

The admission rate for scabies decreased from 13.7 in January to 7.0 per thousand in February.

INFECTIOUS HEPATITIS:

Morbidity from infectious hepatitis was 4.3 per thousand in February as compared with 4.1 in January.

MEASLES:

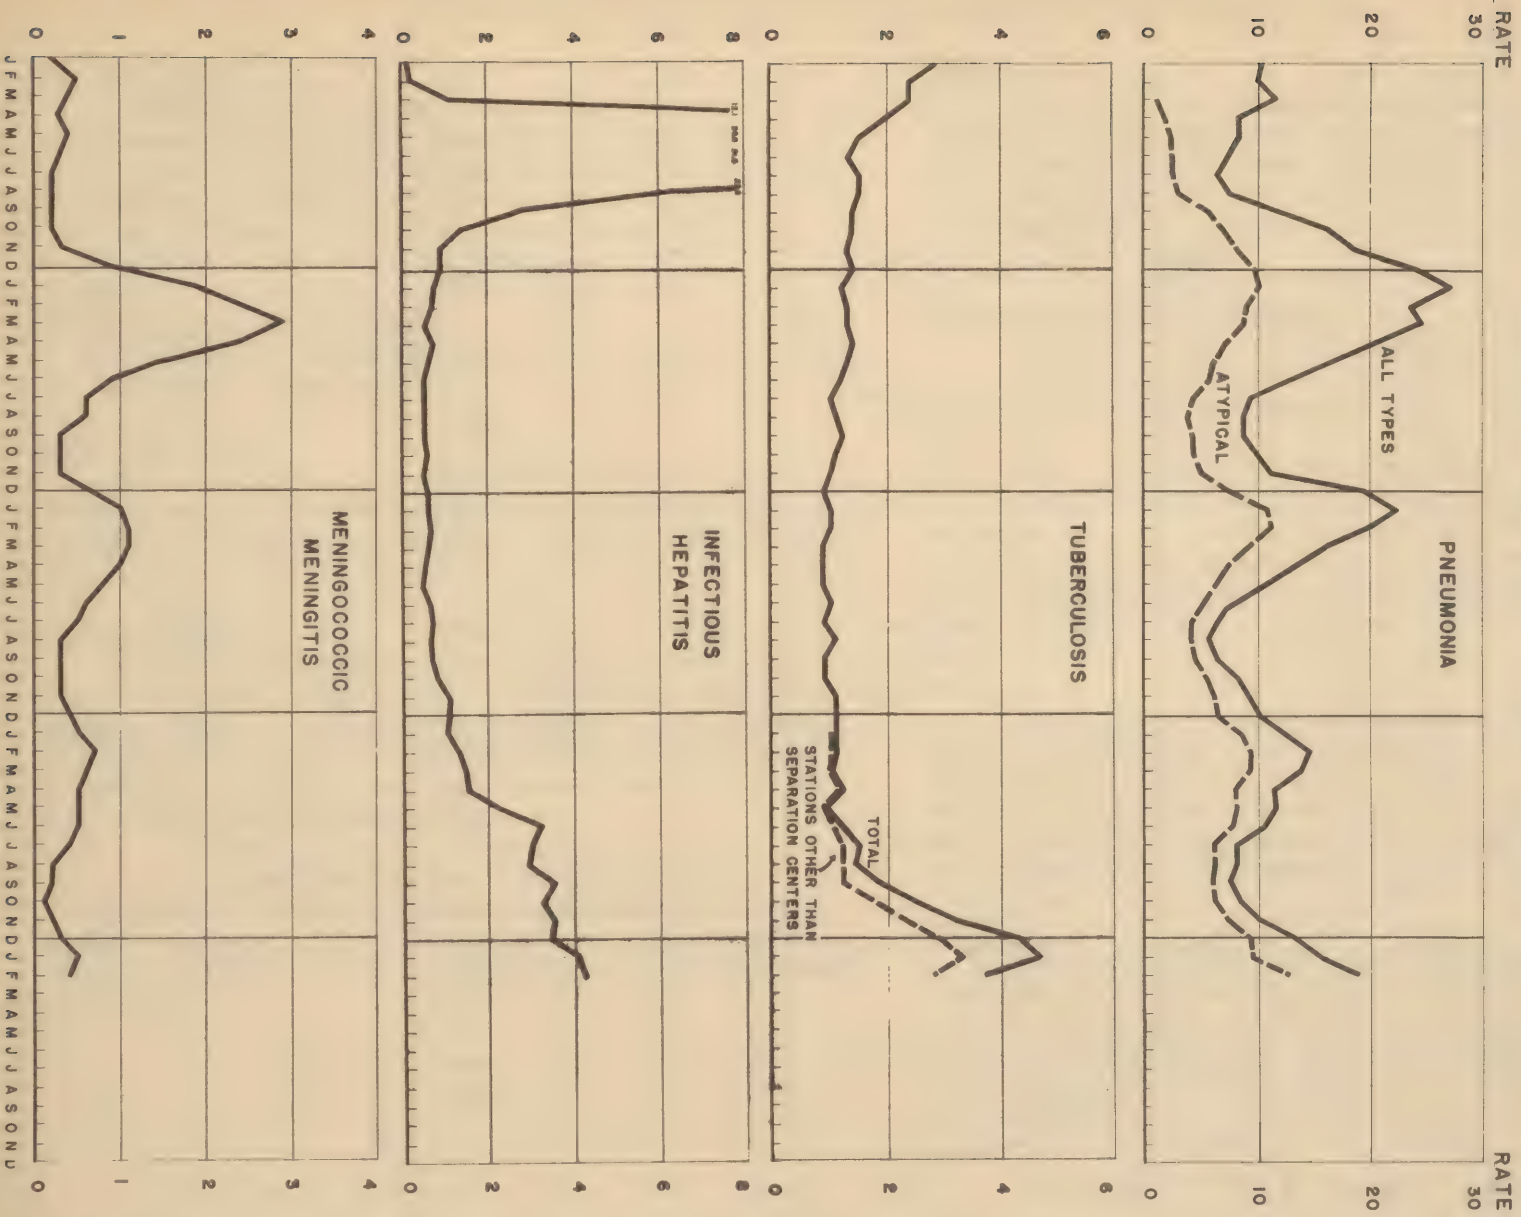

Morbidity from measles increased to 294 cases per week during February as compared with 165 weekly cases in January. The rate moved from 4.3 to 8.7 per thousand. In February of last year the admission rate for measles was 2.5 per thousand per annum, while in February of 1944 the rate had reached 7.8 per thousand.

MUMPS:

Morbidity from mumps increased from 4.7 per thousand to 7.1 during February.

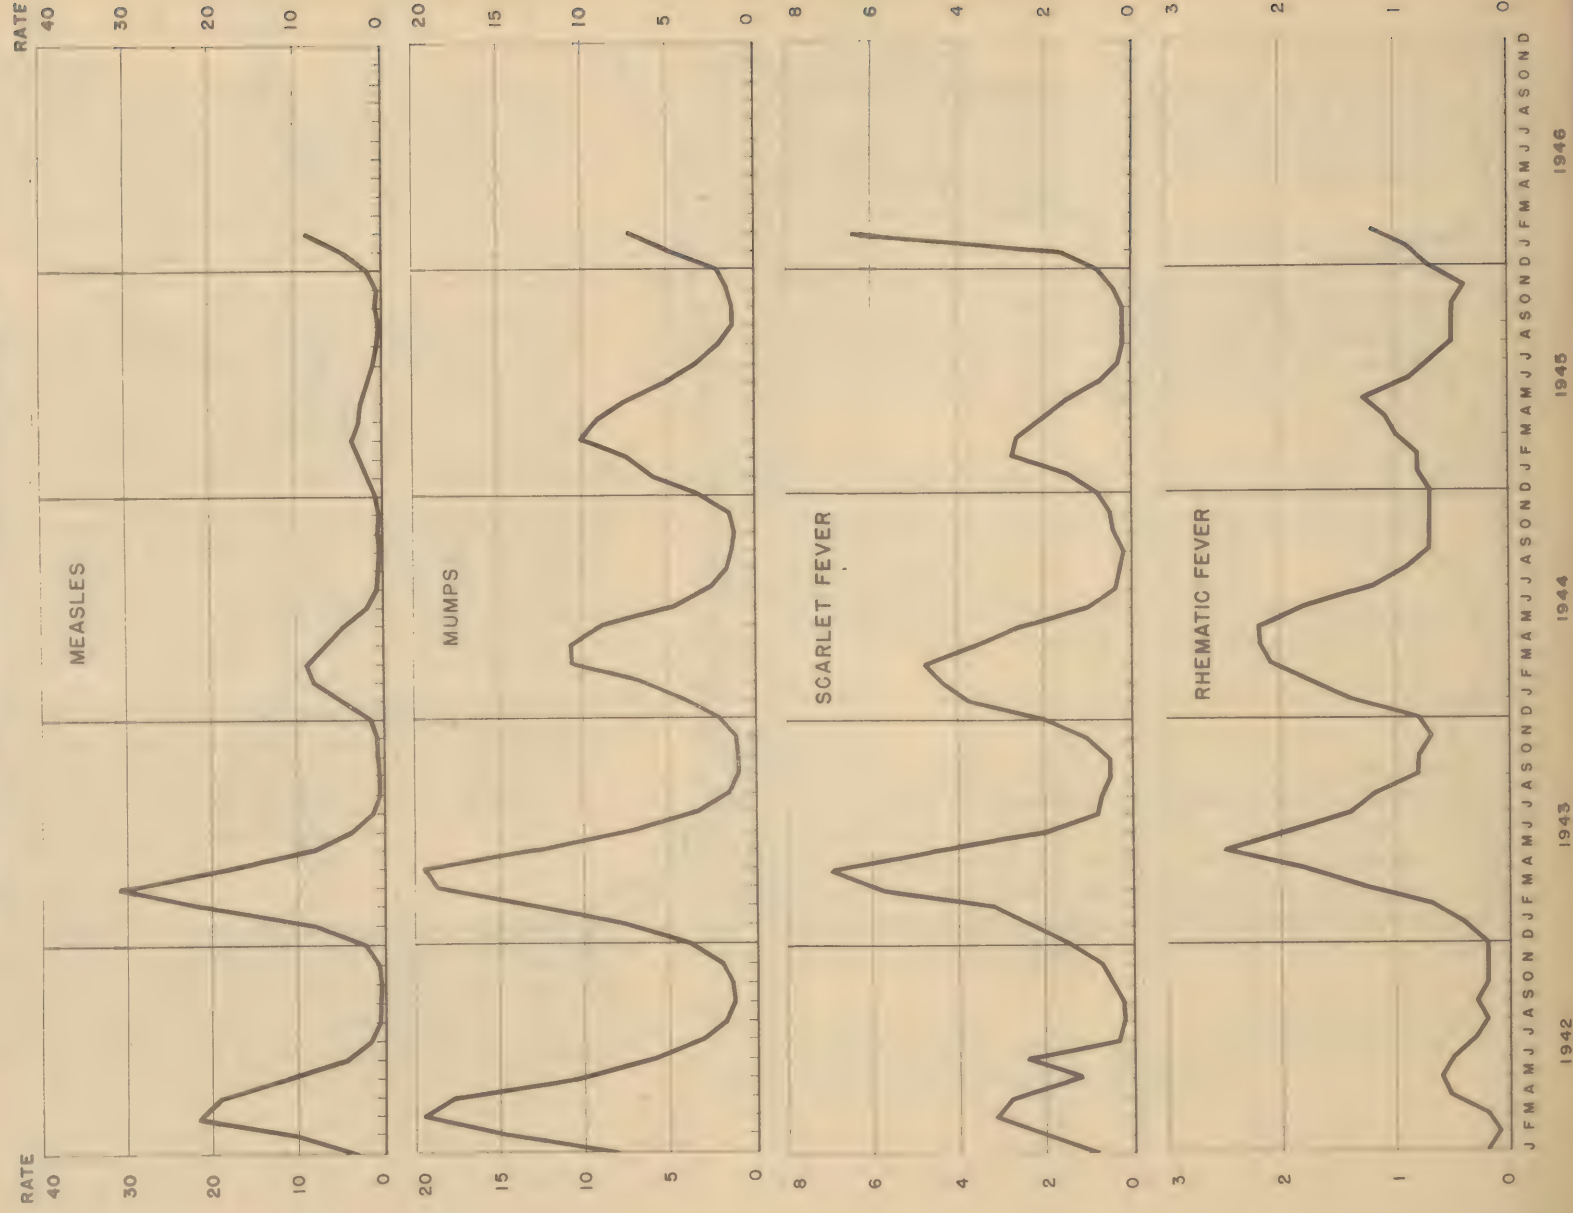

MORBIDITY FROM SELECTED DISEASES

CONTINENTAL UNITED STATES
ADMISSIONS PER 1000 TROOPS PER YEAR

MORBIDITY FROM SELECTED DISEASES

CONTINENTAL UNITED STATES
ADMISSIONS PER 1000 TROOPS PER YEAR

COMMENT ON RECENT DEVELOPMENTS (CONT.)

SCARLET FEVER:

Morbidity from scarlet fever was reported at 6.5 per thousand in February, as compared with 2.8 in February of last year, and 4.4 in 1944. The Military District of Washington reports the highest rate of 35.5 per thousand, while the lowest rate of 2.9 is noted in the Ninth Service Command.

MENINGOCOCCIC MENINGITIS:

Morbidity from meningitis was reported at 0.4 per thousand in February.

RHEUMATIC FEVER:

Morbidity from rheumatic fever increased to 1.2 per thousand, from 0.9 in January. The Military District of Washington reported the highest morbidity from this cause (3.7 per thousand).

TUBERCULOSIS:

Morbidity from tuberculosis was reported at 3.7 per thousand in February, as compared with 4.7 in January. The current relatively high level arises in large part as the result of examinations at separation centers which tend to uncover cases which otherwise would be undetected.

As of 22 February there were 3421 cases of tuberculosis remaining under treatment in hospitals in this country. Of the total cases, 1228 were at Fitzsimons General Hospital and 957 at Bruns General Hospital.

MALARIA:

Morbidity from malaria acquired inside the United States remained at 0.1 per thousand in February. The number of cases presumably acquired outside the United States, which were admitted (or readmitted) for treatment in this country averaged about 316 per week.

NEUROPSYCHIATRIC DISORDERS:

The annual rate of admission for neuropsychiatric disorders decreased from 24.0 in January to 20.4 per thousand in February.

During February an average of 729 CDD's per week were given to enlisted men classified as neuropsychiatric cases; the weekly average for January was 631 such CDD's. CDD's in February for men with neuropsychiatric disorders represented 18 per cent of all CDD's, as compared with 20 per cent in January.

The number of neuropsychiatric cases remaining under treatment as of 22 February was 8705 or about 2350 less than at the end of January. On 22 February 2587 locked ward cases were remaining in hospital. Neuropsychiatric cases remaining represented 6.9 per cent of all patients in hospital.

MORTALITY:

Mortality from all causes during February was reported at 2.14 per annum per thousand strength. The mortality rate from disease was 1.29 per thousand in February while the reported mortality rate from injury increased from 0.78 per thousand to 0.80 per thousand.

COMMENT ON RECENT DEVELOPMENTS (CONT.)

It should be noted that the reporting of deaths on Form WD AGO 8-122 is not complete, particularly for deaths from injury, for which the understatement may be as great as 10 per cent (see Special Report on Deaths in 1944 in Weekly Health Report, Volume V, Report No. 27). The mortality rate from injury when adjusted to allow for this under-reporting is about 0.88 per thousand, resulting in an estimated total death rate from all causes of 2.22 per thousand.

NONEFFECTIVE RATE:

The noneffective rate for Army personnel stationed in this country was about 41 per thousand in February, as compared with 38 per thousand reported for January.

ADMISSIONS TO HOSPITAL AND TO QUARTERS AND DISPENSARY:

"Admissions" entered on WD AGO Form 8-122 include not only all Army personnel admitted to a medical installation and not returned to duty within the same day, but also certain cases which have been "Carded for the record only" (deaths among Army personnel not currently under Army medical care, CDD's among personnel not currently excused from duty, and cases of venereal disease treated on an outpatient status which have not previously been treated for the same current condition by any Army medical installation as an Army case).

During February, of some 83,600 admissions entered on the forms, about 5400 were carded for the record only. Of the 78,200 patients excused from duty, 73,400 were hospitalized immediately upon reporting themselves sick or after a period of treatment in quarters or dispensary, while the remaining 4800 patients were excused from duty in quarters or dispensary, but were not hospitalized during the month.

In January, of about 96,700 admissions reported on WD AGO Form 8-122, approximately 5600 were carded for the record only, 86,000 were hospitalized, and 5100 were excused from duty in quarters or dispensary, but not hospitalized during the month.

Rates of admission to hospital (including transfers from quarters or dispensary) in January were: all causes, 561 per thousand troops per annum; diseases, 532 per thousand; and injuries, 29 per thousand. In February, such admissions for all causes numbered 546 per thousand, while the rates for diseases and injuries were 518 and 28 respectively.
